

Temperature Sensors: Wide Range Thermometry

Spanning the Total Temperature Spectrum

• Range: -450° F to 4200° F (Oxidizing, Reducing, Neutral Atmosphere)
• Noble/Refractory Metal Sheaths
• Noble/ Refractory Metal Elements
• RTD/Thermistor Assemblies
• Base Metal T/C Assemblies

CONVECTRONICS, Inc. is proud to announce its new complete line of Temperature Sensing Devices and related accessory items.

Our manufacturing capabilities cover the broad spectrum of temperature sensing and control. We manufacture all standard design sensors in all thermocouple types, RTD's and thermistors including refractory and noble metals for "Just In-Time Delivery."

We are confident that our products' quality, performance and competitive prices will, indeed, meet the most stringent requirements of your temperature application.

CONVECTRONICS, Inc. has many years of temperature sensing, control knowledge and experience to offer. We invite inquiries on any temperature sensing or control problem whether in design or application. Our technical staff will be glad to assist you on a totally engineered system of controls, sensors, heaters and enclosures to your specifications.

If your needs are technical assistance or price and delivery, please do not hesitate to give us a call toll free at:
